

Machine setting by a few handles

Variable transport speed

JWR2000

We understand

The JWR2000 offers you all the advantages you can expect from a modern gluing machine.

Start/stop-function, variable transport speed as well as overall and parts counter (programmable) and our unique holder system for fixing the cartons are just a few highlights.

The JWR2000 was developed in close cooperation with users and is thus optimally adapted to the needs of the processors.

JWR2000

The well thought-out design of the JWR2000 allows for easy handling and guarantees high productivity. Equipped in a few simple steps, the JWR200 is ready for use quickly.

The sheet transport takes place via infinitely variable speed and always provides the user with a properly glued sheet. The operator can align and fold each sheet quickly and without pressure.

Our unique holder system for fixing the cartons keeps the pile in shape and restrains all restoring forces. At the counter you simply select the number of pieces, so one pile is like the other.

With the optional strapping machine, you straighten the pile without any major effort.

The smartly crafted JWR2000 makes your job easy.

Highlights:

- For all common cold glue types
- Machine setting by a few handles
- Variable transport speed
- automatic start/stop function
- easy cleaning because of removable stainless steel tank
- Holder system for fixing the cartons keeps the pile in shape and restrains all restoring forces
- Sheet transport without markings
- optional integrated strapping machine
- Operation with only one person possible
- ready for use at any socket
- easy cleaning
- save space
- low weight
- low-maintenance

Sheet size / material:

- Max. sheet size: 2000 x 1300 mm
- min. sheet size: 400 x 400 mm
- Special formats on request
- Material thickness up to 15 mm
- also laminated and antistatic coated
